
Needs Analysis

Instructions: Answer each question in the section immediately below to **define scope**, then use those answers to build a Needs Analysis questionnaire that will **evaluate learning needs** and **determine learning objectives**.

Stage 1: Questions for Instructional Design team (*define scope*)

- Why is training needed; what issue/problem is being addressed
- When is training needed?
- Who is requesting training?
- Who is training targeted at?
- How will issue/problem be resolved?
- Which learning format is the best way to address the problem (e-learn, classroom, etc.)
- What is the desired business outcome?
- What metrics will we use to know we are meeting the desired business outcome?

Stage 2: Using answers from above, prepare questionnaire for user group (*determine learning objectives*)

- What critical competencies/behaviors/knowledge are needed?
- What can be trained to meet this, and what cannot be trained?
- Determine which competencies are required, and which are "nice to have"

Stage 3: Survey user group (*learning evaluation*)

Using 5 point rating system, build questionnaire to determine existing competencies, determine performance gaps, and how to prioritize training.

Create 1-3 questions for each of the following categories:

1. Familiarity (*experience*)
2. Application (*real-life use*)
3. Evaluation
4. Strategy/Planning
5. Audience

Students answer questions based on the following:

Rate your level of confidence to each question using this scale:

1=Not at all

2=A little

3=Somewhat

4=Considerable

5=Extremely

Needs Analysis

Category	Skill/Development Area	Confidence Level	Priority	Examples of any previous experience and level	Other comments
		1 – 5	Low / Medium / High		
FAM	I can describe different types of Instructional Design processes				
FAM/AUD	I have a good understanding of the most effective training to suit my audience				
FAM/STR/ APP	I can explain the different mediums used in Instructional Design and when to use each				
STR	I can create an effective training strategy				
EVAL	I can explain multiple ways to elicit feedback from users who have taken my training				
FAM	I can explain multiple ways to gather information for how to build training				
EVAL	I can explain how to assess if training is effective				
APP	I have experience creating real-life customer examples to be used in training				
FAM/STR	I have experience applying learning needs to learning outcomes				
AUD/STR	I can grab the attention of students with my training content				
AUD	I know how to apply real-world scenarios into effective training examples
