

## Module 2: Design Like a Pro

### Lesson 3: Engaging Layouts

#### Activity 1: Analyze Images for Clarity

Open each image in your project full-screen and compare them to each other. All images should be the highest resolution possible and/or equal resolution so that your material doesn't look better or worse between chapters or slides.

#### Activity 2: Analyze Audio for Clarity

Open each audio file in your project and verify that the volume is comparable for all files.

#### Activity 3: Review Storyboard for Movement

1. Open Storyboard created in Lesson 2 ("Building Scripts and Storyboards")
2. Indicate how each panel has movement and if not why
3. Compare panels for complimentary movement

#### Activity 4: Review Storyboard for Variation

1. Open Storyboard created in Lesson 2 ("Building Scripts and Storyboards")
2. Compare each panel to ensure variety. For example:
  - Alternate appearance of bullets and images
  - Use variety of image locations
  - Use variety of transitions

#### Activity 5: Ensure Images Tell a Story

1. Open Script and Storyboard created in Lesson 2 ("Building Scripts and Storyboards")
2. Remove each image and see if only narration and text boxes tell a coherent story
3. Remove supporting narration and text boxes and see if story is coherent with only images

#### Activity 6: Verify Adequate Screentime

1. Open Script and Storyboard created in Lesson 2 ("Building Scripts and Storyboards")
2. Do visuals remain onscreen long enough for users to read and/or describe them out-loud twice?
3. Does narration reflect screen imagery without being too wordy or abrupt?
