
Course Launch, Stabilization, Feedback

Two weeks before go-live, a 'beta' release of the course occurs with a handful of power users from the target group. They will sit through the class and lab and provide feedback on flow and content. Feedback is provided with a pre-built email template, reprinted below in Appendix A.

Developers make updates to course as needed.

One week before go-live, a soft launch occurs with a larger user group of randomly selected students from the focus user group. They will sit through the class and lab and provide feedback on flow and content. Feedback is provided with a pre-built email template, reprinted below in Appendix A.

Developers make updates to course as needed.

After the class is released on the go-live date, feedback is anonymously gathered at the end of each class using Survey Monkey. Info in this survey is reprinted below in Appendix B.

Developers fill out a Planned/Proposed changes document (reprinted below in Appendix C) for any ongoing edits to the material. Depending on the severity of feedback, within 1-2 weeks after go-live, the Project Manager gathers together the team and summarizes Successes, Opportunities, and Lessons Learned. The group determines any small and/or required edits to the course and prioritizes them.

Six weeks after go-live, final post edits are made to the course. Any additional edits would be part of a new project at a later date.

Six months after go-live, the team assesses the course's effectiveness using Survey Monkey. Info in this survey is reprinted below in Appendix D.

Appendix A

Rate each statement below using this scale:		1=Not at all 2=A little 3=Somewhat 4=Considerable 5=Extremely
Statement	Rating	Comments
The course flowed logically from one topic to another		
The course's pace was the appropriate speed		
Examples were relevant		
I understand the differences between the four types of Instructional Design processes		

Launch, Stabilization, Feedback

Rate each statement below using this scale:		1=Not at all 2=A little 3=Somewhat 4=Considerable 5=Extremely
Statement	Rating	Comments
I feel confident that one of these Instructional Design processes will work for my project		
Content was clear, concise, and to the point		
Courseware was visually appealing		
The scenario used in the four Instructional Design processes was appropriate for explaining each process		
Please provide general comments on the following questions:		
Was there any information, images, or content that was confusing or otherwise unclear? Please describe:		
What edits or changes would you make to this course, if any?		
What content, if any, would you eliminate from the course?		
What content, if any, would you add to the course?		

Appendix B

Rate each statement below using this scale:		1=Not at all 2=A little 3=Somewhat 4=Considerable 5=Extremely
Statement	Rating	Comments
The course flowed logically from one topic to another		
The course's pace was the appropriate speed		
Course examples were relevant		
I understand the differences between the four types of Instructional Design processes		
I feel confident that one of these Instructional Design processes will work for my project		
Content was clear, concise, and to the point		
Courseware was visually appealing		
The scenario used in the four Instructional Design processes was appropriate for explaining each process		
The Instructor was prepared to teach the class		
The Instructor demonstrated expert knowledge on the subject		
The Instructor covered all course objectives		
The Instructor provided clear and concise explanations of course content		
Please provide any general feedback, comments, or suggestions about the course or instructor:
